

INNERSPACE

ENGINEERING CORPORATION

SPACE SAVING & PRODUCTIVITY SOLUTIONS

Lower your footprint:

- Save space
- Increase worker and capital productivity
- Stay in your current facility

Increase the use of recycled and renewable materials:

- Steel is the most recycled material on the planet and provides the greatest flexibility
- Recycled plastic and phenolic will not rust
- FSC certified wood is:
 - more sustainably grown and harvested,
 - more renewable than steel or plastic,
 - down-cycle-able, and compostable

Plan for the future:

- Modular building products are:
 - reconfigurable,
 - re-usable and re-locatable,
 - less disruption to occupants on install and reconfiguration,
 - cleaner with less on-site waste
- Proper design and integration with lighting and work flow can greatly increase productivity
- Buy only what you need and make sure it will last as long as you need
- Consider the end-of-use scenario for all purchases:
 - Reuse (best)
 - Recycle (good)
 - Landfill (poor)

InnerSpace provides space-saving and productivity solutions that are affordable and durable while minimizing the impact we might have on future generations' ability to meet their needs.
